Responsible Timber LLC  
615-210-8145

### Overview

Here you will learn about the process of preparing and sawing logs as well as expectations and what it is like working with us. We understand that not everyone has the equipment to follow these instructions but anything you can do to help will make the process move quicker.

### Details:

Please have the logs limbed and cut to length. We can saw from 8 to 12 ft lumber, anything shorter than 8 or longer than 12 can be accommodated, but we just need to know about it beforehand.

If you have the ability to move the logs to a level area and stage them we encourage you to do so because this will help us set up quicker and get to processing the lumber. See the picture for reference, this is how we prefer to have the logs staged.

After we schedule the date we will reach out a couple days in advance to confirm and make sure the weather is going to cooperate. We will also reach out the day before just to let you know we are planning to be there the next morning. Then, we will text you the morning of and let you know our ETA, we typically like to be on the jobsite by 8:30.
